Looks good to me. Waiting for more definitive information is the only reasonable thing to do at this time.

They would like bob goodfellow and Monica smith to approve this. Can you forward to them? (epa). Thanks.

Clean Air Act (CAA) 112r requires a facility to address catastrophic accidental air releases of chemicals in its Risk Management Plan. Ammonium nitrate, a solid, is not currently a chemical material addressed by this provision of the CAA. We do not yet know what happened at this facility. The ongoing investigation will inform us on the plan's adequacy. In addition, the investigation will review if there are any violations. Based on the results of this investigation, EPA may review if changes are required.

Austin,

Can you tell me the following? If EPA knew the amount of ammonia nitrate in the facility in West, would your agency pass this info on to the appropriate agency, which from what I understand is the Department of Homeland Security. How does this process work?

Thanks,

Donna Ressler
